

The image shows the interior of a large, historic stone building. The walls are made of rough-hewn stone, and the ceiling is a complex wooden beam structure. A wooden balcony with a decorative railing runs along the upper level, which is lined with bookshelves filled with books. The ground floor is filled with rows of wooden tables and chairs, arranged in a way that suggests a lecture hall or a large meeting room. Large windows and arched doorways are visible, allowing natural light to enter the space. The overall atmosphere is one of historical grandeur and intellectual pursuit.

THE BIRTHPLACE OF PAKISTAN AND MUSLIM INDIA: MAHMUD'S PALACE, LOST FOR 900 YEARS IN THE AFGHAN DESERTS.

FIG. 5. A HITHERTO UNEXPLORED GHAZNAVID PALACE IN THE HEART OF SOUTH-WESTERN AFGHANISTAN, AND WHOSE WALLS OF SUN-DRIED BRICK ARE STILL LARGELY STANDING AFTER 900 YEARS. THIS VIEW SHOWS THE SOUTHERN FAÇADE AND MAIN ENTRANCE OF THE SOUTHERN PALACE OF

LASHKARI-BAZAR, WITH THE RIVER HELMEND ON THE LEFT, AND, STRETCHING AWAY ON THE RIGHT, THE REMAINS OF THE COURTYARD AND THE GARDEN ENCLOSURES. COMPARE WITH FIG. 2, IN WHICH THE RIGHT, BOTTOM, BASTION IS THAT IN THE CENTRE OF THIS PICTURE. (Photograph by J. P. M. M.)

FIG. 6. WHERE TRIUMPH AND RICHES—IF NOT PEACE—CAME TO MAHMUD ON HIS GOLDEN THRONE: THE CENTRAL COURTYARD OF THE 900-YEAR-OLD SOUTHERN PALACE OF LASHKARI-BAZAR. THIS VIEW IS TAKEN FROM THE NORTH-WEST (I.E., BOTTOM, LEFT, IN FIG. 5) CORNER OF THE CENTRAL COURT.

The history of the Ghaznavid dynasty, whose newly-identified and explored palace at Lashkari-Bazar is described in these and other pages in this issue, is one of the greatest interest and importance in the development of Islam and, eventually, in the birth of modern Pakistan. It began about the middle of the tenth century, when a Turkish slave, called Alptigin, seized the local power at Ghazni, between Kandahar and Kabul, in Afghanistan. He was succeeded by his son-in-law, another Turkish adventurer, Subuktigin, who extended that power, making himself lord of nearly all modern Afghanistan and of the Punjab. His son, the great Mahmud, succeeded him in 977 A.D., and in a series of annual campaigns throughout Northern India and Gujarat made himself and his dynasty immensely rich and powerful, and established Islam in India. He died in

1020 A.D. and was succeeded by his son Masud and some thirteen other princes of his house, perhaps the most famous being Ibrahim (1058-1099). The dynasty came to an end in the twelfth century, the capital, Ghazni, being devastated by the Ghori sultan, Alauddin. The two great cities of this dynasty were "Ghazni," high among the snow-capped mountains, but in the desert, at the meeting-point of the Rivers Helmand and Arghandab. Little remains of these cities. As M. Schlumberger writes in his article: "With the exception of two brick towers, the buildings of Ghazni have disappeared. . . . The ruins of the city of Bamiyan, though seldom visited, were already well known and the visit brought nothing new. But from the top of the citadel, with the help of field-glasses, another impressive group of ruins could be distinguished in the distance. Situated near

TO THE LEFT OF THE CENTRE CAN BE SEEN THE DEEP RECESS OF THE EASTERN IWAN; AND TO THE RIGHT OF THE CENTRE THE SOUTHERN IWAN, LEADING TO THE CROSS-SHAPED HALL AND MAIN ENTRANCE. THE PHOTOGRAPH SHOWS THE SCENE AS THE FRENCH ARCHAEOLOGISTS FOUND IT. (Photograph by J. P. M. M.)

the modern village of Lashkari-Bazar, these ruins themselves had not entirely escaped attention, but nobody had apparently studied them: the 'Encyclopedia of Islam' (art. *Bami*) calls them 'modern.' When we got there at last, late in the afternoon of that same day, our impression was of anything but 'modern.' Here, on the river-bank, were to be seen the mighty ruins of three great palaces, or castles, with walls and towers still standing high. . . . Some of the extent and majesty of these ruins can be seen in the photographs which we reproduce, which, however, cover only one, though the largest, of the three principal palace-castles. The river on which these castles stand is called variously Helmand, Helmand, Helmand and Helmand; and in ancient times it was known as the Eymander. Like its great tributary, the Arghandab, it rises in the mountains of

North-Eastern Afghanistan. It is about 600 miles long and for the first part of its course it is a mountain river, running through valleys which are the summer resort of pastoral tribes. About 90 miles above its confluence with the Arghandab it enters level, gravelly country and becomes a wide and impressive river. At Bami it joins the Arghandab, and its nature can be partly seen in Fig. 1. Thence it flows south-west between the Helmand and the Dashti-Margo Deserts, until it drains in the vast swamps of Sistan, on the border of Persia and Afghanistan, whence it only emerges in years of exceptional flood to irrigate the Ghazni Zirah swamp. This Sistan area was in ancient times highly cultivated with a great system of canal irrigation, but, since the devastations of Tamerlane in the 14th century, has been a barren, treeless waste of alluvial levels.

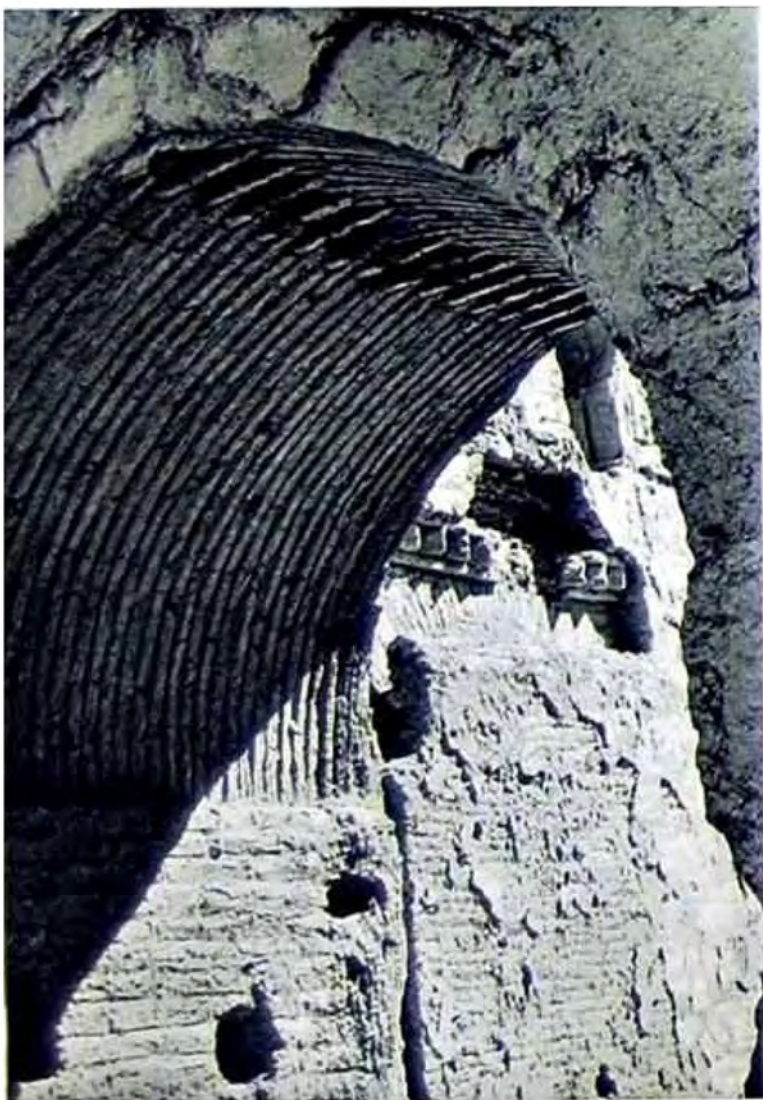

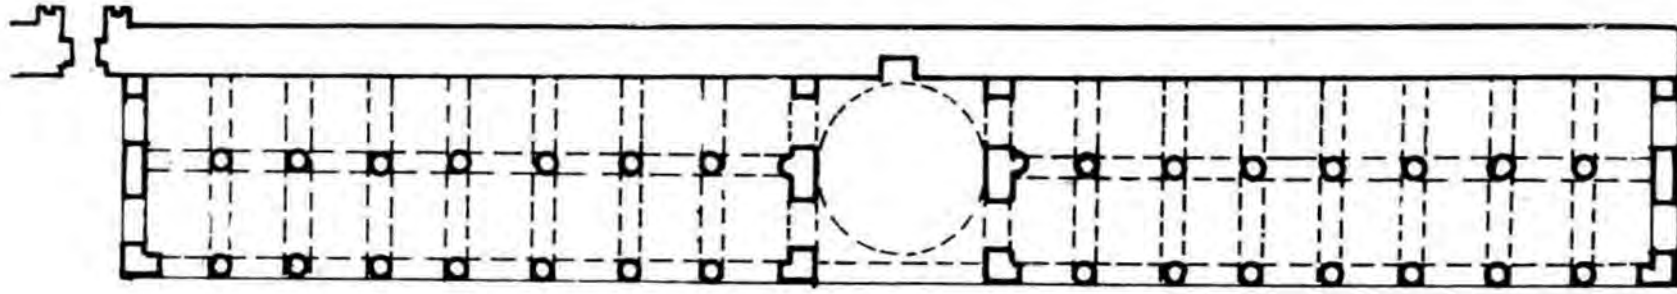

FIG. 8. WHERE THE GHATNAVID SULTAN RECLINED AT HIS BANQUET; AND—MAYBE—LISTENED TO THE STRAINS OF THE GREAT FIRDAWSI: THE BRICK-PAVED BANQUET PLATFORM.
