

The image shows the interior of a large, historic stone building. The walls are made of rough-hewn stone, and the ceiling is a high, dark wooden beam structure. A wooden balcony with a balustrade runs along the right side, above a series of built-in wooden bookshelves filled with books. The main floor is covered with a patterned carpet and is filled with rows of wooden tables and chairs, arranged for a lecture or seminar. Large windows and arched doorways are visible, letting in natural light. A black text box with white text is overlaid on the left side of the image.

Geometri Desenleri

Fig. 6.2 Carved masonry and stone relief, Agra Fort, Agra. See also (Fig. 14.3a). This example is dated 1573, with earlier examples in Iran and Cairo. This pattern is unusual in having a 6-way intersection (Patterns in Islamic Art web site [2017](#), IND 0332)

```
function setup() {  
  createCanvas(400, 400);  
  rectMode(CENTER);  
  angleMode(DEGREES);  
  noFill();  
}  
  
function draw() {  
  background(255);  
  push();  
  translate(width*0.5,height*0.5);  
  rotate(90);  
  for(let i = 0; i<6 ; i++){  
    push();  
    rotate(i*60);  
    translate(100,0);  
    rect(0,0,80,120);  
    pop();  
  }  
  pop();  
}
```

Geometrik Deseni Kodlamak

Örnek 2: Eşrefoğlu Camii, Beyşehir

Aşağıdaki deseni inceleyin ve bu deseni oluşturan temel görsel bileşeni bulmaya çalışın

Geometrik Deseni Kodlamak

Örnek 2: Eşrefoğlu Camii, Beyşehir

Aşağıdaki deseni inceleyin ve bu deseni oluşturan temel görsel bileşeni bulmaya çalışın

Motif

Açıları ve Vertex noktalarını tespit etmek

Aşama 1 : Vertex noktalarını bulalım

Motifi Oluşturmak

```
let a; //inner Radius
let b; //outer Radius

function setup() {
  createCanvas(400, 400);
  angleMode(DEGREES);
  noFill();
  noLoop();
  a = 48;
  b = a * (sin(135) / sin(15));
}

function draw() {
  let angle = 30;

  push();
  translate(width*0.5,height*0.5);
  beginShape();
  for (let i = 0; i < 12; i++) {
    let sx,sy;
    if(i%2==0){
      sx = cos(i*angle) * b;
      sy = sin(i*angle) * b;
    }else{
      sx = cos(i*angle) * a;
      sy = sin(i*angle) * a;
    }
    vertex(sx, sy);
  }
  endShape(CLOSE);
  pop();
}
```

Bezeme Yapısını İnceleyelim

Aşama 2 : Yerleştirmedeki dx, dy ve dxoff değerlerini hesaplamamız gerekiyor.

Bezeme Kodu

```
// Motif class
class Motif {
  constructor(r) {
    this.a = r; //inner Radius
    this.b = r * (sin(135) / sin(15)); //outer Radius
  }

  display() {
    let angle = 30;
    beginShape();
    for (let i = 0; i < 12; i++) {
      let sx, sy;
      if (i % 2 == 0) {
        sx = cos(i * angle) * this.b;
        sy = sin(i * angle) * this.b;
      } else {
        sx = cos(i * angle) * this.a;
        sy = sin(i * angle) * this.a;
      }
      vertex(sx, sy);
    }
    endShape(CLOSE);
  }
}
```

```
let a; //inner Radius
let b; //outer Radius
let dx, dy;
let nRow;
let nCol;
```

```
function setup() {
  createCanvas(800, 800);
  angleMode(DEGREES);
  noFill();
  noLoop();
  a = 16;
  b = a * (sin(135) / sin(15));
  dx = 2 * b;
  dy = 2 * b * cos(30);
  //approximate the nRow and nCol values
  nRow = ceil(height / dy);
  nCol = ceil(width / dx);
}
```

```
function draw() {
  let motif = new Motif(a);
  for (let r = 0; r < nRow; r++) {
    for (let c = 0; c < nCol; c++) {
      push();
      if (r % 2 == 0) {
        //rows 0,2,4,6
        translate(c * dx, r * dy);
      } else {
        //rows 1,3,5,7
        translate(c * dx + b, r * dy);
      }
      motif.display();
      pop();
    }
  }
}
```
